Subject: AMSELCO Prospecting Permit ES-15255

To: Bureau of Land Management
P. O. Box 11348
Jackson, MS 39213
ATTN: Richard Wallace

On July 15, 1987, I visited the site of prospecting permit ES-15255 on Tract 60d, Long Cane Ranger District, Sumter National Forest with David Watkins of AMSELCO.

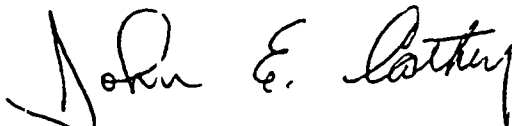

He has submitted a plan to do exploration on Tract 60d. After visiting the site with Mr. Watkins, I have no objections to this exploration with the following stipulations:

1. Access to the base line be confined to the existing fire break.
2. All disturbed soil be revegetated to suitable cover within 10 days of completion of the requested work. The seed mixture and fertilizer rates are:
 - 800 lbs. 10-10-10 fertilizer per acre
 - 1500 lbs. agricultural lime per acre
 - 30 lbs. Kentucky 31 fescue per acre
 - 10 lbs. rye grass
 - 4 lbs. Tillman clover
 - Mulch to cover disturbed area

All soil disturbances will be levelled to original contour and disked prior to application of seed and fertilizer.

3. All material resulting from the operation, drilling mud, debris, litter, etc. to be removed or disposed of in a manner suitable to the Forest Service.

If you have questions, let me know.
